

FOURDRINIER WIRE SECTION

The need in the paper mills to increase the production speed more and more, and the maintenance times has carried the paper producers from year to year towards the formation on one or multi-fourdrinier cantilever machines. De Iuliis has soon caught the capacity of this solution and it has devoted many of its resources to the development and potentiation of such plants. Nowadays, infact, the cantilever multi-fourdrinier machines, together with the air cushioned headboxes are the company's pride in the formation field. In order to satisfy the more and more exigent market, thanks to its utmost flexibility, De Iuliis is able to utilize any type of material in the construction of its plants. It uses both painted or covered carbon steel and stainless steel of any kind. De Iuliis has put a particular care in the choise of the materials to use, in order to prolong the life of each element of the plants, such as: aluminium for the movable parts, ceramic coverings for drainage parts and hard rubber for rolls.

The Marketing Management of De Iuliis company is at your disposal for any information and contact.
